---

PROFILE

Passionate and skilled **Software Developer** with experience in **mobile and web development**. Proficient in **Flutter, React, HTML, CSS, JavaScript, Python, Java, and C**, with a strong foundation in **PostgreSQL** for database management. Enthusiastic about **open-source contributions, hackathons, and mentorship**. Adept at problem-solving, collaboration, and delivering high-quality software solutions.

EMPLOYMENT HISTORY

❖ **Member & Mentor, amFOSS** .... Dec 2024 — Present

Kollam

An active member at amFOSS, the Free and Open Source Software (FOSS) community
in Amrita Vishwa Vidyapeetham, Amritapuri Campus. My active involvement in this
community has helped me gain both technical and soft skills

❖ **Contributor, CCextractor**

CCExtractor's Ultimate Alarm Clock. Successfully merged **~15 commits** contributing **2000+ lines of code**, improving features, fixing bugs, and optimizing performance. This experience has deepened my expertise in **collaborative development, code reviews, and large-scale project management**

Github Link

EDUCATION

❖ **Amrita School Of Computing** .... Aug 2023 — Present

Computer Science Of Engineering   *Kollam*

❖ **FIITJEE** .... Dec 2021 — Dec 2023

Secondary School

❖ **FIITJEE** .... Jan 2019 — Dec 2021

Primary School   *Hyderabad*

SKILLS

Mobile Development: Flutter .... ***Skillful***	Frontend Development: React, HTML, CSS, JavaScript .... ***Skillful***
Python .... ***Skillful***	Java .... ***Skillful***
C .... ***Skillful***	PostgreSQL .... ***Skillful***

PROJECTS

- **V-Track-It** | Flutter , Firebase , OpenSource **(current working)**

Leading the **core development** of a **role-based duty leave and event management system** for students, faculty, and wardens. Implemented **Microsoft authentication, automated role detection, and approval workflows.**

Project-link

- **FlavourVoyage** | HTML, CSS, and JavaScript

FlavourVoyage is a personal frontend project built using **HTML, CSS, and Java Script** to explore the fundamentals of web development. The project serves as an interactive **food discovery platform**, showcasing various cuisines from around the world with visually appealing layouts and responsive design.

Project-link

- **Tour Package** | React (frontend) and Express.js (backend).

A **full-stack travel booking platform** built with **React (frontend) and Express.js (backend)**. It allows users to browse and book tour packages with a **responsive UI and basic authentication**. This project helped me understand **API integration, backend handling, and full-stack development concepts**

Project-link

- **Sound Studio**| HTML,CSS,JS,POSTGRESQL.NODE

A **music production** built with**Node.js and PostgreSQL**, supporting **client session management, studio bookings, audio recording, and equipment assignments**. I actively contributed to the **entire development process**, handling **database design, API development, and backend logic**. This personal project deepened my expertise in **backend architecture, database management, and server-side development**

Project-link

- **CarbonX**| Flutter (Front End)

CarbonX is a **frontend-only** app designed to **track and reduce carbon footprint**, helping users build eco-friendly habits. I developed the **entire frontend**, ensuring a **seamless user experience and intuitive UI**. Future plans include integrating **AI-driven insights** to optimize data and enhance sustainability recommendations.

 Project-link

- **Travel Agency**| C (CLI based)

A **command-line travel management system** built in **C**, designed for booking and managing tour packages. It features **user input handling, data storage using files, and basic CRUD operations**. This project enhanced my understanding of **C programming, file handling, and structured data management**.
